

Escape The North Pole – User Manual

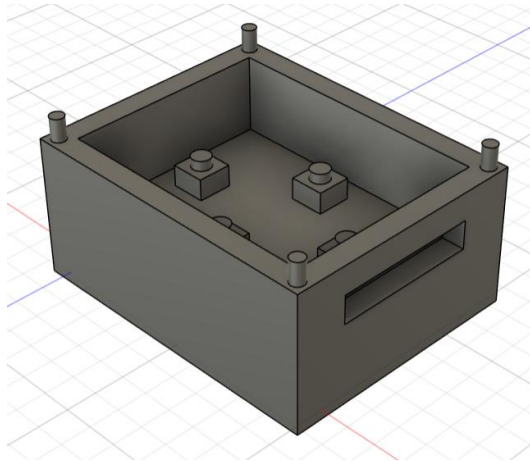

Introduction

The theme of this escape room is “Escape the North Pole”. Within each room, you are tasked with a different Christmas themed activity in order to save Christmas! In the first room you are tasked with creating toys since you are one of Santas elves. Once you successfully create enough toys, then you must collect present boxes for the toys. Finally, you must deliver presents to the children of Fort Collins.

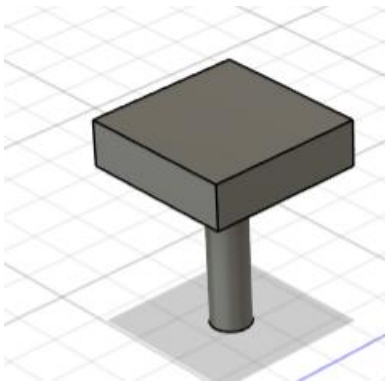

Circuit Set up

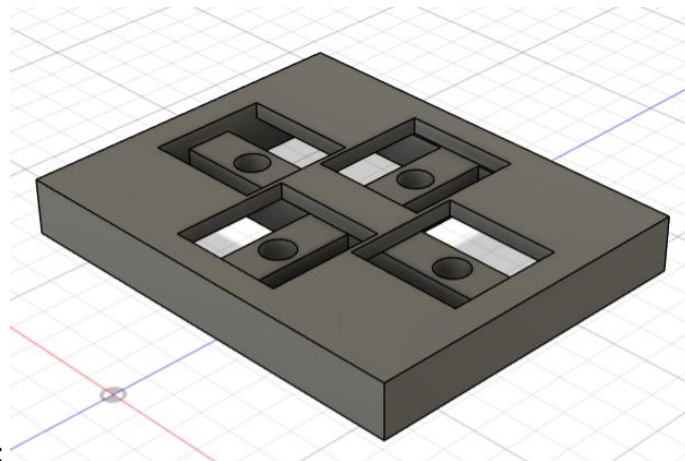

Make the preceding circuit with the small breadboard included in the Arduino kit. Then place it inside the base of the 3d print. Put the cap on the base and then insert the buttons (four of them) into the cap. Please note that it may be easier to place the breadboard inside the base first and then build the circuit. Ensure that the five wires (the ground, and the four data wires) come out of the hole in the side of the base. It may also be necessary to put some tape around the narrow end of the buttons to help with the tolerance of the parts, so they do not get stuck to your fingers and come out of the cap.

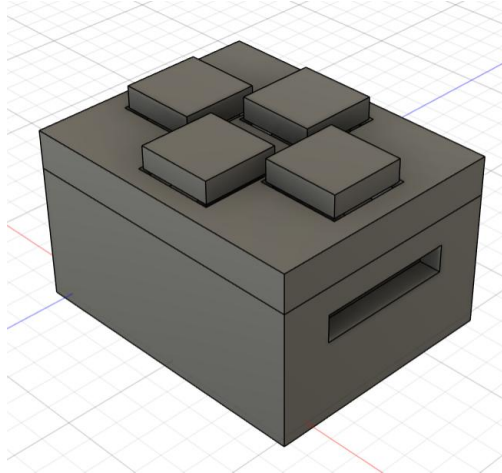

Base with the breadboard:

How to Play

Room 1- *Toy Maker Room*

Press the directions on the D-pad to put the toy parts into the boxes in the center. Put the parts in the correct order from left to right to create the 6 random toys within 1 minute.

Room 2- *Toy Collector*

Line up the D pad so the cables are coming out on the right side of the box. You are now ready to begin the game.

The goal of this game is to collect 10 presents while avoiding the trees. You have three lives, represented by the hearts in the bottom right of the screen. Lives are lost when you run into a tree. On your last life, no hearts will appear. You lose the game by running out of lives and win by collecting 10 presents, shown by the score in the bottom left. Control the player (the sleigh) by pressing the left and right buttons on the D pad. The very edges of the screen are out of bounds.

Before the first present is collected, no trees will appear. This is to give the player time to react and to give a sort of tutorial to the room.

Room 3- Present Delivery Room

- The goal of this room is to deliver 10 presents.
- In order to drop a present from the sleigh, you must click the down arrow.
- If you hit a house a message will be displayed in the command window and the present will sit on the house momentarily.
